ABSTRACT OF THE DISCLOSURE

[00048]   A method and system of generating a listing in a network-based commerce system is provided. The method includes receiving listing identification data from a user, and retrieving listing data associated with the listing based on the listing identification data. Thereafter, a listing is generated that is at least partially based on the listing data and posted on the network-based commerce system. In one embodiment, the user may edit the listing data prior to posting the listing. The network-based commerce system may include a database of listing data associated with at least one of movies, music, games, books and motor vehicles. In one embodiment, a plurality of check boxes is provided each of which are associated with an attribute of the listing and the method automatically, without human intervention, checks attributes based on the listing data.
